Prevent Liberty tab going to sleep

Justin Looper - 2026-11-02 - Comments (0) - Liberty Converse

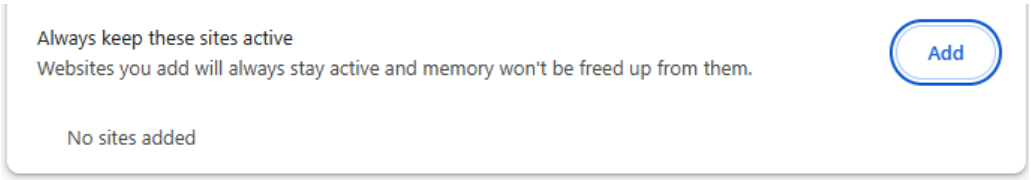

Modern browsers save on system resources by putting tabs into an inactive state after a certain amount of time. When accessed, the tab will reload for the most up-to-date information.

For Liberty, this means the system will log you out and you would need to log in again.

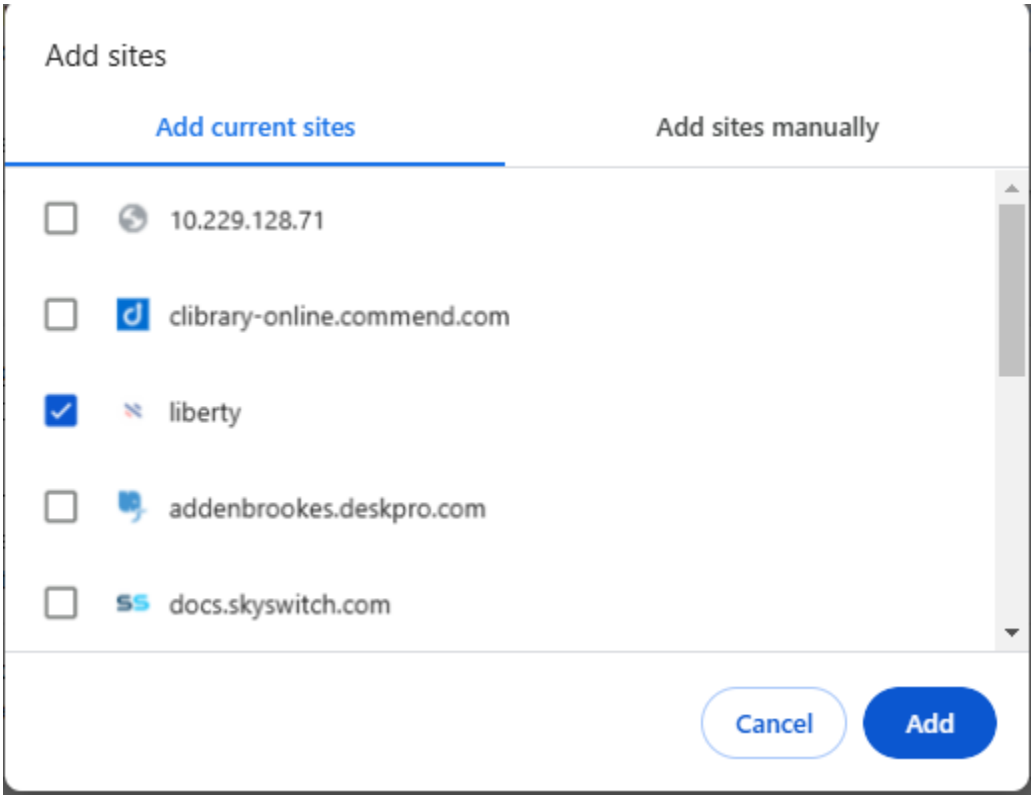

To prevent this, we can exclude the site.

Chrome

- Go to chrome://settings/performance
- Find the section that states “Prevent these sites from going to sleep”

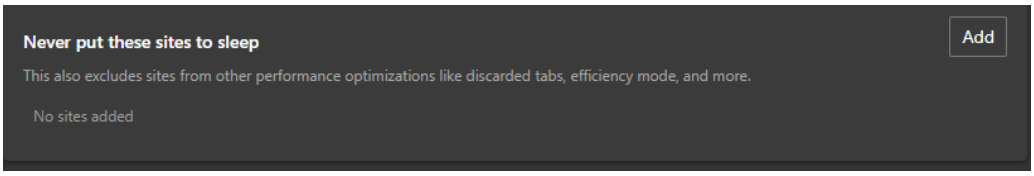

- Select **Add**
- Select the Liberty tab

- Press Add again.
- You can now close down the settings page and return to the liberty tab.

Microsoft Edge

- Open edge://settings/system
- Find the Optimize Performance section
- Locate “Never put these sites to sleep”

- Select Add
- Enter http://liberty/* (There is a star at the end here)
- Select **Add** again
- You can now close down the settings page and return to the liberty tab.
